SERIES 0601 **RETRACTABLE RAIL SHELTER**

Designed for door openings up to 10'W x 10'H, the Series 0601 is designed to provide an air-tight passage way from the loading dock to the railcar doors. When the spring-loaded shelter is released it automatically extends and seals itself against the railcar. When not in use the Series 0601 rail shelter is manually retracted up against the building wall protected from moving railcars and wind. The Series 0601 creates a tight seal that blocks out foul weather, insects, dust and dirt, while saving money on energy costs. A large selection of tough abrasion resistant fabrics makes this unit an excellent long lasting investment. Rail shelters help productivity by increasing safety, protecting personnel, products and equipment.
